Motorised temperature regulating unit for heating and cooling systems

167 series

Function

The motorised temperature regulating unit is configured for use with an outside compensated or modulating temperature regulator to control the flow temperature in heating and cooling

Complete with motorised three-way mixing valve, flow and return temperature gauges, secondary circuit shut-off valves and pre-formed shell insulation.

This unit can be coupled to the 559 series SEPCOLL separator/ distribution manifold with 125 mm centre distance connections and 550 series manifolds.

The safety thermostat (code 165004) and mounting bracket (code165001) are optional.

Product range

Protection class: UPM3S Auto 25-60: IP 44
UPML 25-105: IPX2D
PARA 25/9 - PARA 25/9 IPX4D

Pump centre distance: 130 mm

Pump connections: 1 1/2" (ISO 228-1) with nut

Temperature gauges

Double scale: 0-80 °C (32-176 °F)

Safety thermostat kit code 165004 (optional)

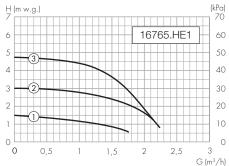

Setting temperature: 55 ± 3 °C Protection class: IP 65 Contact rating: 10 A / 240 V

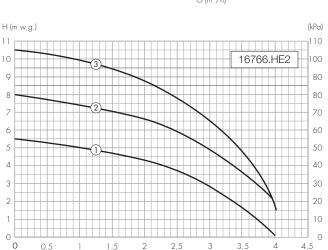

Mounting bracket code 165001 (optional)

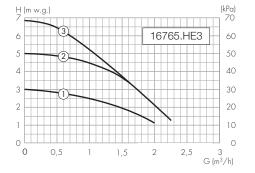

terial: stainless steel

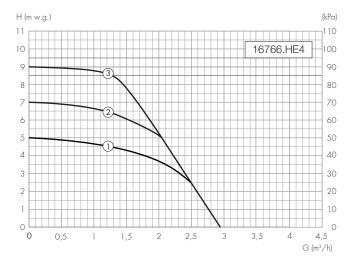

Head available at the regulating unit connections

Tests carried out with constant pump head.

Note:

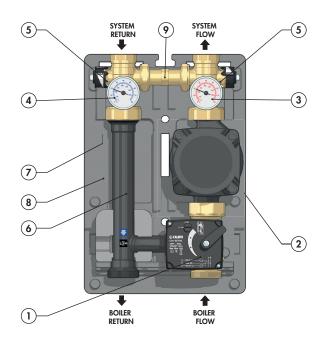

The pumps can operate at constant speed (UPM3 only) with constant or proportional pressure control, which adapts the performance to the system requirements.

G (m³/h)

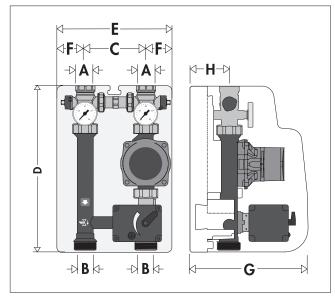

For further details, see the installation instruction sheet of the pump supplied in the package.

Characteristic components

- 1. Mixing valve with three-point actuator / 0-10V
- 2. High efficiency pump
- 3. Flow temperature gauge
- 4. Return temperature gauge
- 5. Shut-off valves on secondary circuit
- 6. Connecting pipe (with check valve)
- 7. Operating wrench for secondary circuit shut-off valves
- 8. Insulation
- 9. Blind stub pipe (closed)

Hydraulic diagram

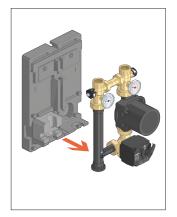

Right hand-left hand reversibility

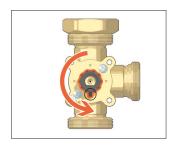

The unit is assembled in the factory with right-hand side upward flow (equivalent to left-hand side downward flow). If necessary, the flow direction can be exchanged. For this reason, the nuts on the unit are not fully tightened in the factory, making it easier to carry out this procedure if required. We recommend always checking that the nuts have been fully tightened during installation.

To make the exchange, proceed as follows:

Remove the insulation. The front and rear shells are easy to remove as they are slightly interlocked with each other.

Turn the position indicator by hand.

Position the connecting pipe on the right-hand side, rotating it on its axis by 180°.

Completely unscrew the captive nuts (using suitable spanners) located under the flow and return shut-off valves. Unscrew the captive nuts on the mixing valve, and then remove the valve and pump.

Remove the motor from the valve.

- 4. Extract the union with the universal key code 387127.
- Turn the valve by 180°. Insert the union into the top connection and tighten it with a suitable key. Tighten it fully.

In HE2 versions with a UPML 25-105 pump, the electronic part of the pump must be rotated by unscrewing the four screws, as indicated by the arrows, and turning the body anticlockwise by 90°. If this step is not performed, it will not be possible to fit the unit back inside the insulation. In HE1 versions with a UPM3 Auto L pump, no changes to the circulators are required.

Invert the flow and return temperature gauges.

Assemble the unit as shown in the figure and fully tightening the captive nuts, taking care to position the seals correctly.

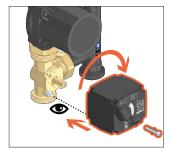

Assemble the motor and refit the position indicator on the 10. actuator (fig. a). Turn the control lever (fig. b).

- Fit the actuator onto the valve and secure it by tightening the corresponding screw, making sure that the actuator retainer is fully inserted. Refer to the picture below for correct assembly of circulator UPML 25-105.
- HE2 version UPML 25-105 pump

12. Move the square spacer and fit it on the right-hand side.

Note: The central notch in the insulation can be used to house the circulator and safety thermostat electrical wiring cables.

13. Assemble the insulation.

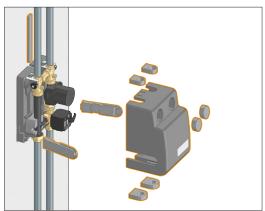

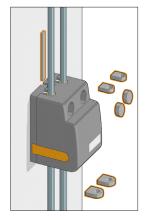

Check the hydraulic seals of all connections before putting the unit into service.

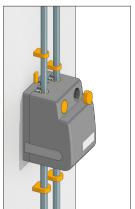

Construction details

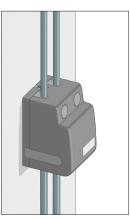

Pre-formed shell insulation

The insulation allows use on heating and cooling systems. It is equipped with special inserts that help to improve insulation and minimise condensation build-up.

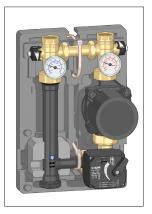

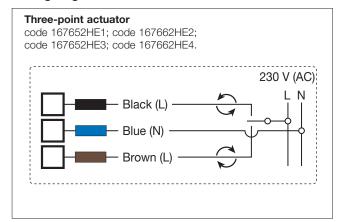

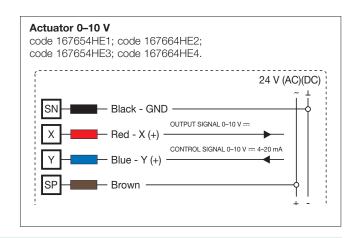

Note: if the maximum medium flow temperature is greater than 60°C, the two circular front caps have to be removed to prevent the circulator from

When fitting the rear shell to the assembly, it is recommended to use two clamps, as shown in the figure, to ensure that the insulation adheres perfectly to the pipes and to minimise the likelihood of condensation buildup.

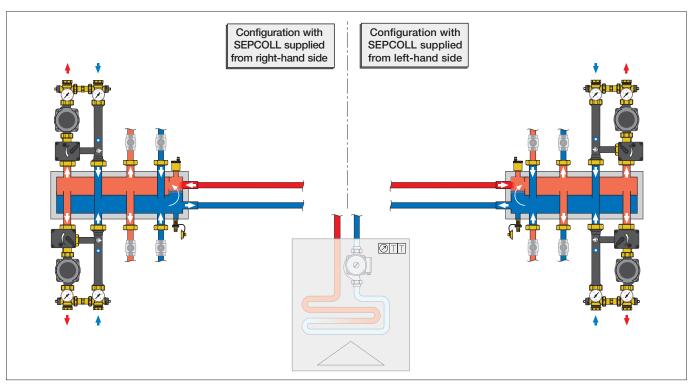

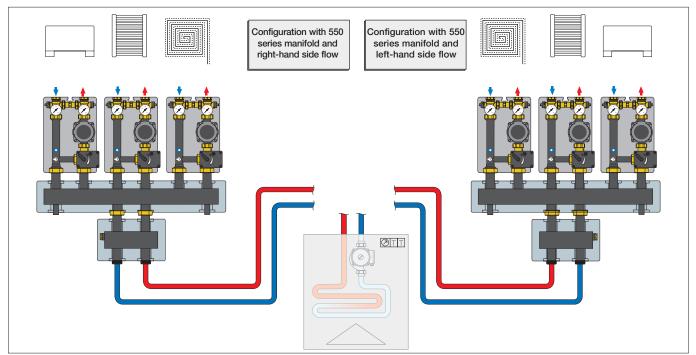

Wiring diagrams

Installation

Mounting bracket

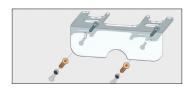

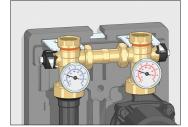

16500] Mounting bracket. In stainless steel.

Bracket installation

The mounting bracket for wall installation must be secured using wall anchors, using the corresponding holes on the base.

The unit should be applied to the bracket, using the corresponding seats under the hexagonal part of the shut-off valves.

Accessories

165006

Pair of eccentric tailpieces. Centre distance: 105–145 mm. Connections: 1 1/2" F with captive nut x 1" F.

165002

Female union with captive nut, complete with seal.

Connections: 1 1/2" F with captive nut x 1" F.

Example of installation

The union with captive nut allows installation of the 167 series unit on any 1" M pipe.

3871

Universal key.
Can be used for unions from 3/8" to 1".

Code

387127

519

Differential by-pass for 165, 166 and 167 series units.
Setting range: 1–6 m w.g.
Maximum working pressure: 10 bar.
Maximum working temperature: 100 °C.

Code

519006

Safety thermostat kit

165004

Safety thermostat kit for heating. Setting temperature 55°C ±3 Protection class: IP 65. M4 thread.

165003

Sensor holder extension.

1" M x 1" M connections.

Side connections:

M4 F x M4 F x 1/8" F x 1/4" F.

The safety thermostat kit is used to control the maximum flow temperature to the system. In the event of overheating, it commands the regulator to stop the pump, thus preventing the system from being damaged. To facilitate positioning of the bulb, the sensor holder extension **code 165003** can be installed on the regulating unit flow line.

Electrical connection

For safety thermostat electrical connection details, please refer to the documentation corresponding to the three-point regulator.

161

Digital regulator with functional synoptic diagram for heating and cooling complete with immersion flow probe and Ø 6 mm PT1000 return probe (pocket to be chosen according to the pipe, see accessories).

Optional climatic probe.

Adjustment temperature range: 5–95 °C.

Electric supply: 230 V - 50/60 Hz. Control signal: 3-point, 0–10 V. Protection class:

IP 20 / EN 60529.

Probe cable length: 1,5 m.

Code

161010

Coupled with 161 series controller

Replace both temperature gauges with the special pockets for the 161 series supplied in the 167 unit package.

1520

Climate regulator complete with digital flow probes and external probe.

Compatible with three-point actuator.

Adjustment range: 20–90 °C. Electric supply: 230 V - 50 Hz. Protection class: IP 40.

Code

1520 01	with 1 channel	
1520 02	with 2 channels	
1520 03	with 3 channels	

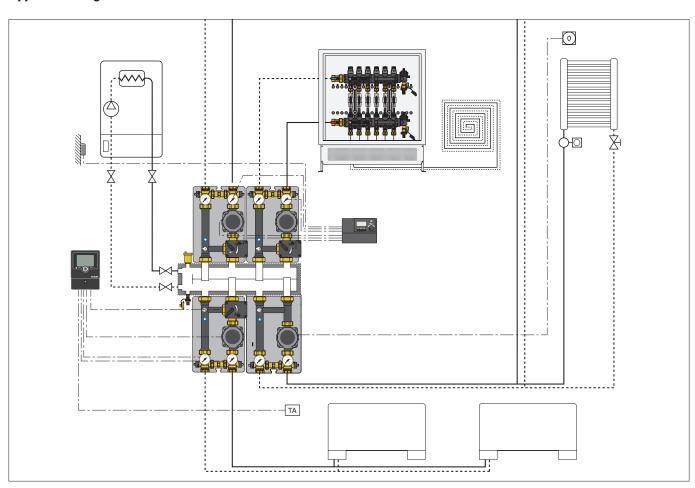

Coupled with 1520 series controller

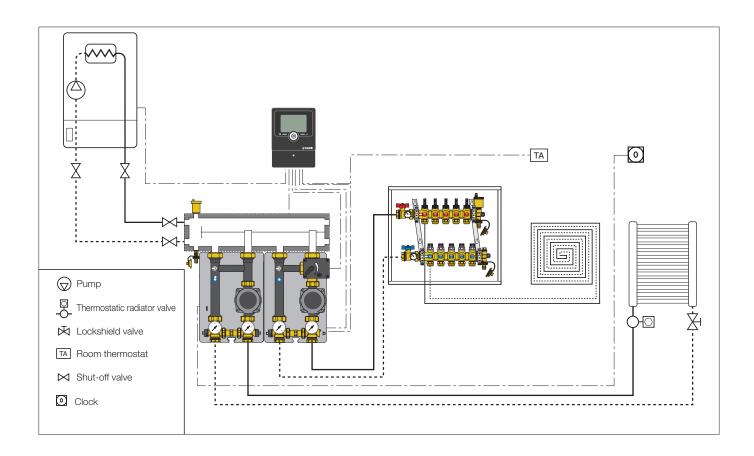

Replace the flow temperature gauge with the special pocket for the 1520 series supplied in the 167 unit package.

Application diagrams

SPECIFICATION SUMMARY

167 series (code 167652 HE1 - 167654 HE1 - 167662HE2 - 167664 HE2)

Motorised temperature regulating unit for heating systems. Regulation with three-way sector valve. Right-left swappable. Connections to primary circuit 1 1/2" M (ISO 228-1). Connections to secondary circuit 1" F (ISO 228-1)

(code 167652 HE1 - 167654 HE1); 1 1/4" (ISO 228-1) (code 167662 HE2 - 167664 HE2). Connection centre distance to the primary and secondary circuit 125 mm. Maximum working temperature 100 °C. Maximum working pressure 1000 kPa (10 bar). Complete with: three-way sector regulating valve, brass body, brass obturator. Actuator with three-point control signal (code 167652 HE1 - 167662 HE2), electric supply 230 V, protection class IP 44, operating time (90° rotation) 150 s. Actuator with 0–10 V control signal (code 167654 HE1 -167664 HE2), electric supply 24 V, protection class IP 44, operating time 90°) 75 s.. High-efficiency pump UPM3S Auto 25-60 (UPML 25-105), protection class IP 44 (UPML 25-95, IPX2D); Dual-scale temperature gauges 0–80 °C (32–176 °F); secondary circuit shut-off valves. With pre-formed shell insulation in EPP.

167 series (code 167652 HE3 - 167654 HE3 - 167662 HE4 - 167664 HE4)

Motorised temperature regulating unit for heating and cooling systems. Regulation with three-way sector valve. Rightleft swappable. Connections to primary circuit 1 1/2" M (ISO 228-1). Connections to secondary circuit 1" F (ISO 228-1) (code 167652 HE3 - 167654 HE3); 1 1/4" (code 167662 HE4 -167664 HE4). Connection centre distance to the primary and secondary circuit 125 mm. Maximum working temperature 100°C. Maximum working pressure 1000 kPa (10 bar). Complete with: three-way sector regulating valve, brass body, brass obturator. Actuator with three-point control signal (code 167652HE3 - 167662HE4), electric supply 230 V, protection class IP 44, operating time (90° rotation) 150 s. Actuator with 0–10 V control signal (code 167654HE3 -167664HE4), electric supply 24 V, protection class IP 44, operating time (90° rotation) 75 s. PARA 25/7 (PARA 25/9) high-efficiency pump, protection class IPX4D; Dual-scale temperature gauges 0–80 °C (32–176 °F); secondary circuit shut-off valves. With pre-formed shell insulation in EPP.

Code 165001

Stainless steel mounting bracket.

Code 165002

Female union with captive nut, complete with seal. Connections 1 1/2" F with nut x 1" F (ISO 228-1).

Code 165003

Sensor holder extension. Connections 1" M x 1" F (ISO 228-1) with captive nut.

Code 165004

Safety thermostat kit, setting temperature 55 ± 3 °C, protection class IP 65. M4 thread.

Code 519006

Differential by-pass valve. Brass body. Connections 1" M x 1" M. Stainless steel spring. Setting range 1-6 m w.g. (10-60 kPa). Maximum working pressure 10 bar. Maximum working temperature 100 °C.
