

PRODUCT FEATURES

- Anti-rotation/anti-vibration pinned float: Creates space between float and air vent wall to prevent float hang-up from debris or variations in separator installation orientation.
- Anti-corrosion coalescing mesh:
 Constructed of glass-filled nylon. More resistant to dissolved oxygen and acidic fluids than plated metals.
- Corrosion resistant: All components highly resistant to hydronic chemical additives or unstable pH fluid.

- Large-diameter chamber:

 Slows fluid flow dramatically. Combines with concentric, sharp-edged mesh design to cause micro-bubbles to efficiently collect and coalesce. Highly effective automatic air
- Robust stainless steel float linkages: Reliable float alignment even during turbulent conditions such as filling from bottom.
- Optional service check valve: Allows expansion tank removal without purging system.

High performance air elimination

Dissolved oxygen and other gasses within hydronic systems can cause excessive corrosion and sediment formation. The DISCAL® micro-bubble coalescing air separator with high discharge capacity and unique chamber design automatically and efficiently removes system gasses. A robust design and 100% anti-corrosion components enable DISCAL to provide a long, trouble-free life.
