

LEGIOMIX® 2.0

Hybrid electronic mixing valve

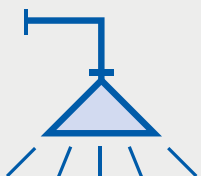

6000 series

www.caleffi.com

PATENT PENDING

- Combines the typical function of the mechanical thermostatic mixing valve and the management efficiency of an electronic mixing valve in a single device.
- Fast and accurate temperature control – indispensable for use in domestic hot water distribution circuits.
- Electronic regulator with programming of temperature levels and thermal disinfection cycles for the prevention of Legionella growth.
- Fitted for data saving function with recording of temperatures and functional parameters.
- Actuator and electronic regulator housed in a single functional casing thus allowing simplified wiring.
- Fitted for remote control with specific transmission protocols such as MODBUS-RTU for use in Building Management Systems (BMS).
