

Antifreeze valve

108 series www.caleffi.com

- Prevents ice forming in the heat pump circuit avoiding any damage to the machine and pipes.
- Mechanical protective system.
- The version with the air sensor allows the system to work in cooling mode, even when the water temperature is approaching 3 °C.

ANTIFREEZE VALVE

CODE	CONN.	Kv

ANTIFREEZE VALVE WITH AIR SENSOR

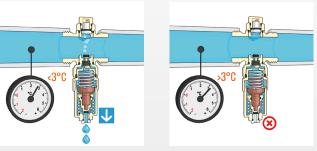

OPERATING PRINCIPLE

ACS

The antifreeze valve 108 series allows drainage of the medium in the circuit when the circuit temperature reaches an average value of 3 °C.

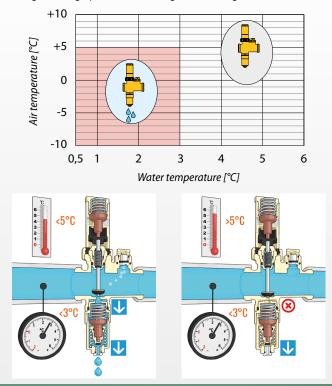

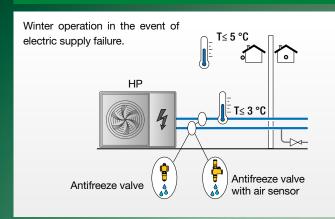

OPERATING PRINCIPLE

The 108 series antifreeze valve with air sensor allows drainage of the medium in the circuit when the circuit temperature reaches a value of $3\,^{\circ}\text{C}$.

In outside temperature conditions over 5 $^{\circ}$ C, the antifreeze valve cut-in is inhibited by the air temperature sensor. This prevents the valve from cutting in during operation in cooling mode during summertime.

APPLICATION DIAGRAM

TECHNICAL SPECIFICATIONS

Working temperature range	0–65 °C
Maximum working pressure	10 bar
Medium	acqua
Medium temperature (opening)	3 °C
Enabling of antifreeze function with low outside air temperature (108611-108711)	< 5 °C
