Introducing the Award-winning CALEFFI XF™

MILWAUKEE – Monday, Jan. 22, 2024: Caleffi North America is proud to introduce the award-winning [CALEFFI XF](#) “Xtra Filtration” magnetic dirt separator designed to provide state-of-the-art protection for today’s high efficiency heat pumps and condensing boiler systems. Equipped with an exclusive “first pass filter” featuring an internal scrub brush mechanism along with magnetic and non-magnetic separation technology that Caleffi is renowned for, the XF delivers state-of-the-art protection to ensure today’s modern equipment operates at peak efficiency.

What about maintaining system performance? Magnetic separators that require disassembly for cleaning are notoriously messy. Not with the XF’s “clean hands” process. To purge the system of impurities, turn off the circulator, open the blowdown valve, remove the pull-out magnet stem from the dry well, and rotate the top knob to brush the internal mesh filter free of debris.

To reduce hydraulic pumping resistance, a 50% bypass feature is standard on some models. The XF is available in 1”, 1½” and 1¼” NPT, press and sweat connections.

The Caleffi XF is the 2023 winner of [DESIGN PLUS powered by ISH](#) and is one of three [2024 AHR Innovation Awards](#) finalists in the heating category. The XF will be on display at the [AHR Expo](#) held January 22-24, 2024 in Chicago at [Booth S7981](#).
