Coffee with Caleffi™ Webinar Series: Troubleshooting Hydronic Systems, Part 1

MILWAUKEE – Thursday, Feb. 2, 2023: There is an ongoing need for technicians who can diagnose and correct issues with all types of HVAC systems. Labor projections consistently show that this demand will become even more pressing in the future. Where should troubleshooters start for non-manufacturer specific tips and procedures? **John Siegenthaler, P.E.** will lead a two-part webinar discussion to guide our audience through the process of troubleshooting performance issues in hydronic systems. This first edition of *Coffee with Caleffi™* will be on Thursday, Feb. 23 from 12 noon – 1:00 p.m. CST.

The webinar coincides with the release of the latest edition of *idronics™*: Troubleshooting Hydronic Systems. Subscribers to the journal will receive a hard copy of the new edition in February. Caleffi also provides an interactive experience for the journal which can be explored at idronics.caleffi.com.

Siegenthaler is a seasoned industry leader and passionate teacher, eager to share his over 40 years' experience in the understanding and proper application of water-based engineering principles with our audience. He is the principal of Appropriate Designs and a regular contributor to industry publications.

The Coffee with Caleffi monthly educational webinars are free and are intended for engineers, contractors, designers and wholesalers. A *Certificate of Attendance* is emailed to attendees following the event for continuing education audits.

CALEFFI – *Creating innovative, superior performance hydronic and plumbing products that help customers live comfortably and economically, while softening their impact on the environment.*
