Coffee with Caleffi™ : **Troubleshooting Hot Water Recirculation – A Case Study**

MILWAUKEE, WISC. – Thursday, Aug. 1, 2019: Have you ever received a call from a large multi-family complex with residents complaining about instantaneous domestic hot water (DHW) availability? Worse yet, have you been called out to investigate and repair pinhole leaks in a building's DHW circulation return system? New to the series, **Mark Eatherton** is eager to share how he resolved a 40-year-old recirculation problem that threatened to shut down a multi-family subsidized housing project due to a lack of readily available DHW in the building at the next *Coffee with Caleffi™* webinar on **Thursday, Aug. 22 at 12 noon CDT.**

Eatherton boasts a 40+ year career in the industry, is a licensed master plumber and licensed master mechanical contractor. He loves to teach, write and educate and has been doing so for over 25 years. An avid supporter of the *Radiant Professionals Alliance*, he is employed by Advanced Hydronics, Inc. (Denver, Colo.) where he is responsible for designing, managing, training and troubleshooting tough plumbing and hydronic related problems.

The one-hour educational webinars are free and are intended for contractors, designers and wholesalers. A *Certificate of Attendance* is emailed to attendees following the event for continuing education audits. Please visit our website at www.caleffi.us for schedule details and registration.

CALEFFI – *Creating innovative, superior performance products that help customers live comfortably and economically, while softening their impact on the environment.*
