Coffee with Caleffi™ : **Debris and Particle Removal in Hydronic Systems**

MILWAUKEE – Monday, Aug. 3, 2020: The ideal fluid within a hydronic system would have no impurities, air bubbles or dissolved gasses in order to insure optimal performance. But have you experienced such symptoms as low thermal efficiency, rapid wear and damage to expensive components, thereby compromising system performance, longevity and warranty coverage? **Bob "Hot Rod" Rohr**, Caleffi training and education manager, will discuss how to maximize system protection with a gold standard at the next *Coffee with Caleffi™* webinar on **Thursday, Aug. 20** from **12 noon-1 p.m. CDT**.

Recently recognized with the [2020-2022 Carlson-Holohan Industry Award of Excellence](#), Rohr is sure to delight the audience with his expertise and quick wit. He travels from sea to shining sea, sharing his 35+ years' of experience as a plumbing, radiant heat and renewable energy contractor. Rohr is a regular contributor for industry publications where he enjoys putting his rubber-to-the-road experiences to pen.

The one-hour educational webinars are free and are intended for contractors, designers and wholesalers. A *Certificate of Attendance* is emailed to attendees following the event for continuing education audits. Please visit our website at www.caleffi.us for schedule details and registration.

CALEFFI – *Creating innovative, superior performance products that help customers live comfortably and economically, while softening their impact on the environment.*
